MA's Acrylic coating

Definition

Paste coating based on acrylic and additives, coloured in the mass for decorating smooth, matt inside walls.

Application

Prior application of the acrylic primer white mural onto a smooth substrate.

Using a small, stainless steel smoothing tool, randomly apply a coating of MA's acrylic coating with large strokes at variable distances from each other or superimposed in order to cover the base.

The drying time between layers is 1 to 3 hours.

The second layer must be applied at the time of matting of the first layer in random strokes but while scraping. Do not sand or plate. Rinse the material with water.

Appearance

Matt.

Output

200 to 250 g m² for the first coat/150 g m² for the second coat.

Maintenance

Cleaning with water.

Packaging

1 and 5 kg.

Composition

Mineral filler

(calcium carbonate, re-dispersible resin and additives).

Group III class 2.

Not subject to labelling.

Precautions

Use gloves/The final appearance and homogeneity of the colour depend on the regularity of the substrate and mixing as well as the implementation conditions. Store in a dry room away from frost and intense heat. All the information given in this technical sheet is given as for information only and shall not incur our responsibility. Tests must be carried out.
